Lease: Jeanerette # 1

Kewanee Oil Company
P. O. Box 2239
Tulsa, Oklahoma 74101

Gentlemen:

On February 25, 1971, an Agent from the Inspection and Enforcement Division was in the Bayou Pigeon Field, Iberia Parish, Louisiana, and stopped to check your production facilities on the above referenced lease. He reports that there are no spill pans or retaining walls around the platform to prevent the spillage which occurs in everyday operations from resulting in pollution. Statewide Order No. 29-B, Section VIII., Paragraph C-2 states that in water, swamp or marsh areas where the building of fire walls is impossible or impracticable permanent tanks should be placed on a impervious platform surrounded by a metal gutter to catch all of the oil and other waste which may cause pollution. It also states that a sump should be provided to catch the run-off from the gutters.

We would appreciate being advised within ten (10) days of your plans to comply with existing Conservation regulations.

Yours very truly,

J. M. MENEFEE, Commissioner
Department of Conservation
